

# Web Development & Design Foundations with HTML5

Tenth Edition

## Chapter 4

### Visual Elements and Graphics

# Learning Outcomes

- Create and format lines and borders on web pages
- To add graphics to web pages
- Optimize an image for web page display
- Configure images as backgrounds and hyperlinks
- Configure visual effects with CSS3
- Configure RGBA and HSLA color with CSS3
- Use the meter and progress elements
- Follow recommended web design guidelines for graphics on web pages

# Horizontal Rule Element

Configures a horizontal line

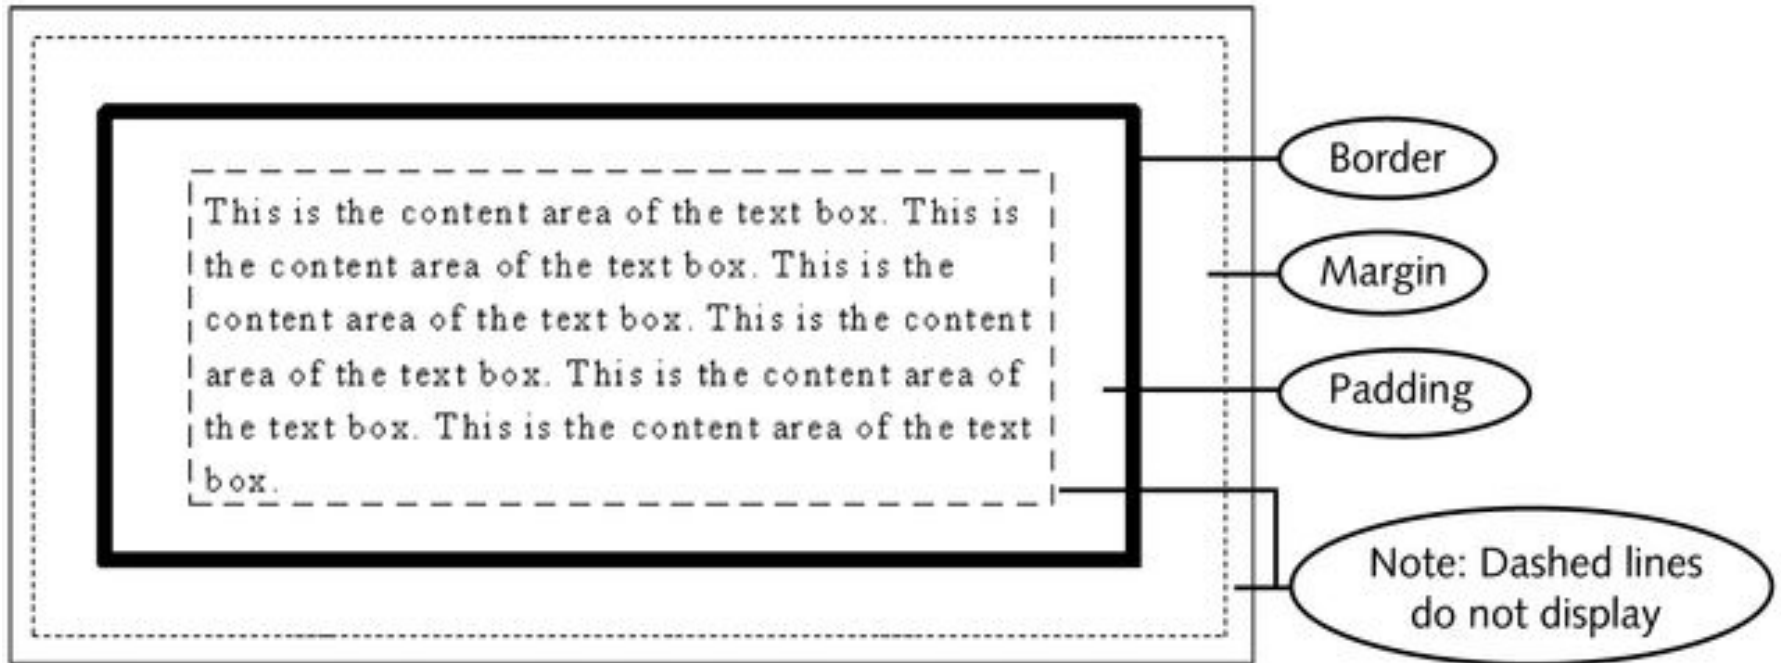

`<hr>`

**Figure 4.1** The `<hr>` tag configures a horizontal line

# Box Model –

Each Content Box can have Margins, Borders, & Padding

# CSS border Property

Configures a border on the top, right, bottom, and left sides of an element

Consists of

- border-width
- border-style
- border-color

```
h2 { border: 2px solid #ff0000 }
```

**Heading with Border**

# CSS Borders

Description	Property Name		
Overall shorthand property	border		
Individual side shorthand properties	border-left, border-top, border-right, border-bottom		
Specific shorthand property	border-style	border-width	border-color
Individual properties	border-left-style border-right-style border-top-style border-bottom-style	border-left-width border-right-width border-top-width border-bottom-width	border-left-color border-right-color border-top-color border-bottom-color

## Heading with Border

```
h2 { border-bottom: 2px solid #ff0000 }
```

# Border-style options

- none
- dotted
- dashed
- solid
- double
- groove
- ridge
- inset
- outset

**Figure 4.2** Examples of the various border-style values rendered by Firefox

# CSS padding Property

Configures empty space between the content of the element and the border

Set to 0px by default

```
h2 { border: 2px solid #ff0000; padding: 5px; }
```

**Heading with Border**

No padding property configured:

**Heading with Border**

# Configure Padding on Specific Sides of an Element

Use CSS to configure padding on one or more sides of an element

- padding-bottom
- padding-left
- padding-right
- padding-top

Heading with Border

```
h2 { border: 2px solid #ff0000;  
      background-color: #cccccc;  
      padding-left: 5px;  
      padding-bottom: 10px;  
      padding-top: 10px; }
```

# CSS padding Property Shorthand: two values

Two numeric values or percentages

- first value configures top and bottom padding
- the second value configures left and right padding

```
h2 { border: 2px solid #ff0000;  
      background-color: #cccccc;  
      padding: 20px 10px;  
}
```

**Heading with Border**

# CSS padding Property Shorthand: four values

Four numeric values or percentages

- Configure top, right, bottom, and left padding

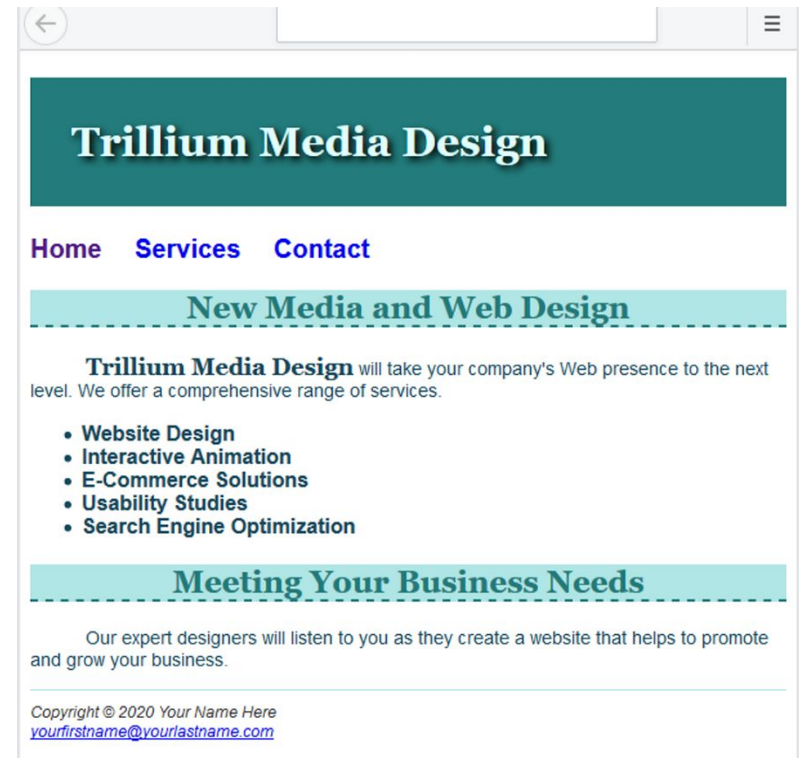

```
h2 { border: 2px solid #ff0000;  
      width: 250px;  
      background-color: #cccccc;  
      padding: 30px 10px 5px 20px;  
}
```

**Heading with Border**

# Hands-On Practice

```
h2 { background-color: #B0E6E6;  
      color: #237B7B;  
      font-family: Georgia, "Times New Roman", serif;  
      text-align: center;  
      border-bottom: 2px dashed #237B7B; }
```

# Checkpoint questions:

1. Is it reasonable to try to code a web page that looks exactly the same on every browser and every platform? Explain your answer.
2. When a web page containing the style rules below is rendered in a browser, the border does not display. Describe what is incorrect with the following code:  

```
h2 { background-color: #ff0000  
      border-top: thin solid #000000  
      }
```
3. True or False? CSS can be used to configure visual elements such as rectangular shapes and lines on web pages.

# Types of Graphics

Graphic types commonly used on web pages:

- GIF
- JPG
- PNG
- WebP

# Types of graphics - GIF

- Graphics Interchange Format

- Best for clip art.
- Maximum of 256 colors
- One color can be configured as transparent
- Can be animated
- Uses lossless compression
- Can be interlaced

# JPEG

- Joint Photographic Experts Group
- Best used for photographs
- Up to 16.7 million colors
- Use lossy compression
- Cannot be animated
- Cannot be made transparent
- Progressive JPEG – similar to interlaced display

**Figure 4.7** A JPEG saved at 80% quality (55KB file size) displays well on a web page

# PNG

- Portable Network Graphic
- Supports millions of colors
- Supports multiple levels of transparency  
*(but most browsers do not – so limit to one transparent color for Web display)*
- Supports interlacing
- Uses lossless compression
- Combines the best of GIF & JPEG
- Well-supported by modern browsers

# WebP

- <https://developers.google.com/speed/webp/>
- Supports millions of colors
- Supports transparency
- Uses both lossy and lossless compression
- Intended to provide improved compression for GIF and JPG images
- Browser support is growing

# HTML Image Element

- Configures graphics on a web page

```

```

- src Attribute
  - File name of the graphic
- alt Attribute
  - Configures alternate text description
- height Attribute
  - Height of the graphic in pixels
- width Attribute
  - Width of the graphic in pixels

**Figure 1.3** Who really updated that web page you are viewing?

# Image Link

- To create an image hyperlink use an anchor element to contain an image element

**Home**

```
<a href="index.html"></a>
```

- Some browsers automatically add a border to image links.
- Configure CSS to eliminate the border  
**img { border-style: none; }**

# Thumbnail Image

A small image configured to link to a larger version of that image.

```
<a href="island.jpg"></a>
```

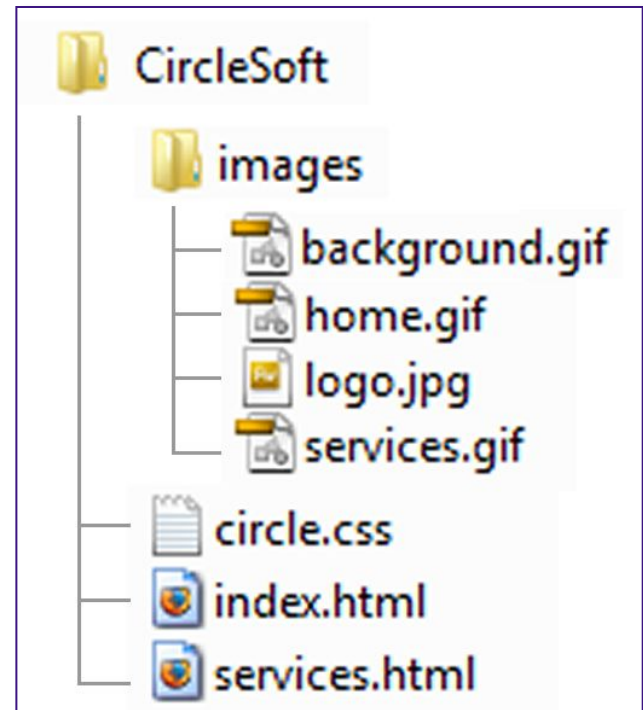

# Image Optimization

- The process of creating an image with the lowest file size that still renders a good quality image—**balancing image quality and file size**.
- Photographs taken with digital cameras are not usually optimized for the Web
- Image Editing Tools:
  - GIMP <https://www.gimp.org/> (FREE!)
  - Adobe Photoshop
  - Pixlr <https://pixlr.com/x/> (FREE!)

# Organizing Your Site

- Place images in their own folder
- Code the path to the file in the src attribute

****

# HTML5 Figure and Figcaption Elements

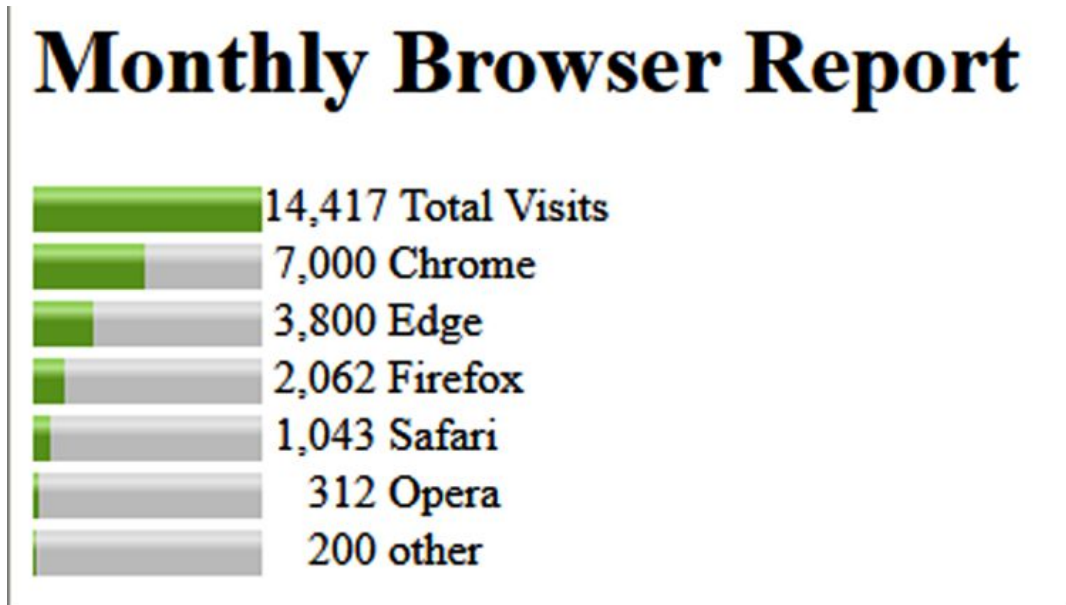

Figure Element: contains a unit of content that is self-contained, such as an image, along with one optional figcaption element.

```
<figure>  
  <img src= "myisland.jpg" width= "400"  
    height= "400"  
    alt="Tropical Island Getaway">  
  <figcaption>  
    Tropical Island Getaway  
  </figcaption>  
</figure>
```

# HTML5 Meter Element

```
<meter value="14417" min="0" max="14417">14417</meter>14,417 Total Visits<br>
<meter value="7000" min="0" max="14417">7000</meter> 7,000 Chrome<br>
<meter value="3800" min="0" max="14417">3800</meter> 3,800 Edge<br>
<meter value="2062" min="0" max="14417">2062</meter> 2,062 Firefox<br>
<meter value="1043" min="0" max="14417">1043</meter> 1,043 Safari<br>
<meter value="312" min="0" max="14417">312</meter> &nbsp;&nbsp;&nbsp; 312 Opera<br>
<meter value="200" min="0" max="14417">200</meter> &nbsp;&nbsp;&nbsp; 200 other<br>
```

# HTML5 Progress Element

Displays a bar that depicts a numeric value within a specified range

```
<progress value="5" max="10">50%</progress>
```

Progress Towards Our Goal

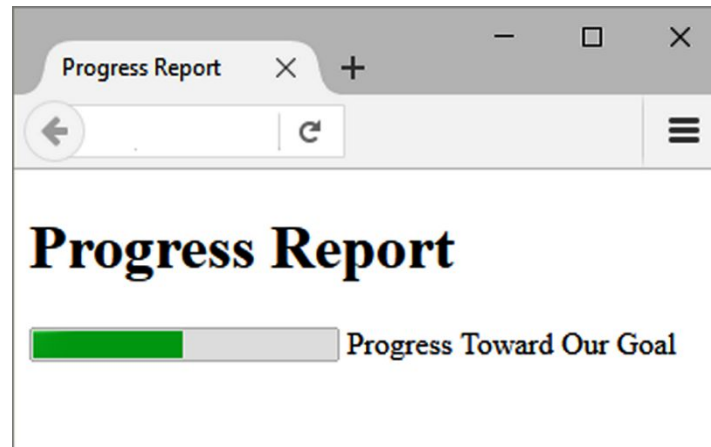

Figure 4.16 The progress element

# CSS background-image Property

Configures a background-image

By default, background images tile (repeat)

```
body { background-image: url(background1.gif); }
```

# CSS background-repeat Property

## CSS background-position Property

background-image: repeat

background-image: repeat-x

background-image: repeat-y

background-image: no-repeat

LEFT TOP  
0% 0%

CENTER TOP  
50% 0%

RIGHT TOP  
100% 0%

LEFT CENTER  
0% 50%

CENTER  
50% 50%

RIGHT CENTER  
100% 50%

LEFT BOTTOM  
0% 100%

CENTER BOTTOM  
50% 100%

RIGHT BOTTOM  
100% 100%

# CSS background-repeat and background-position Property

The default placement of a background image is top left.

The background-position property can change this placement.

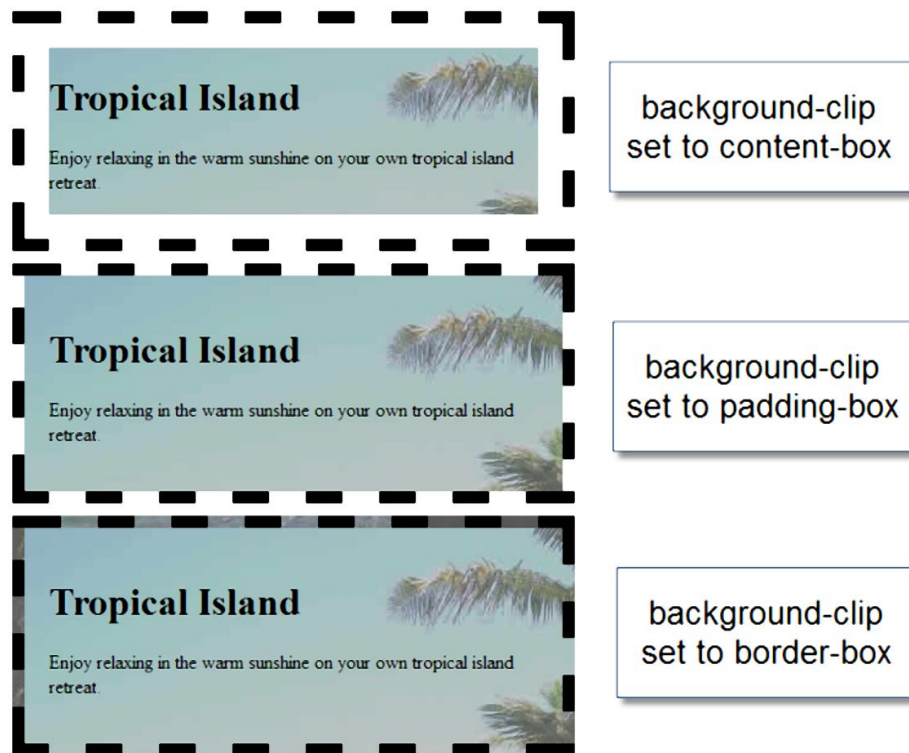

```
h2 { background-image: url(newweb.gif),  
      background-position: right;  
      background-repeat: no-repeat; }
```

New Media and Web Design

# CSS background-clip Property

- confines the display of the background image

**Figure 4.23** The CSS background-clip property

# CSS background-origin Property

- positions the background image relative to the content, padding or border

background-origin  
set to content-box

background-origin  
set to padding-box

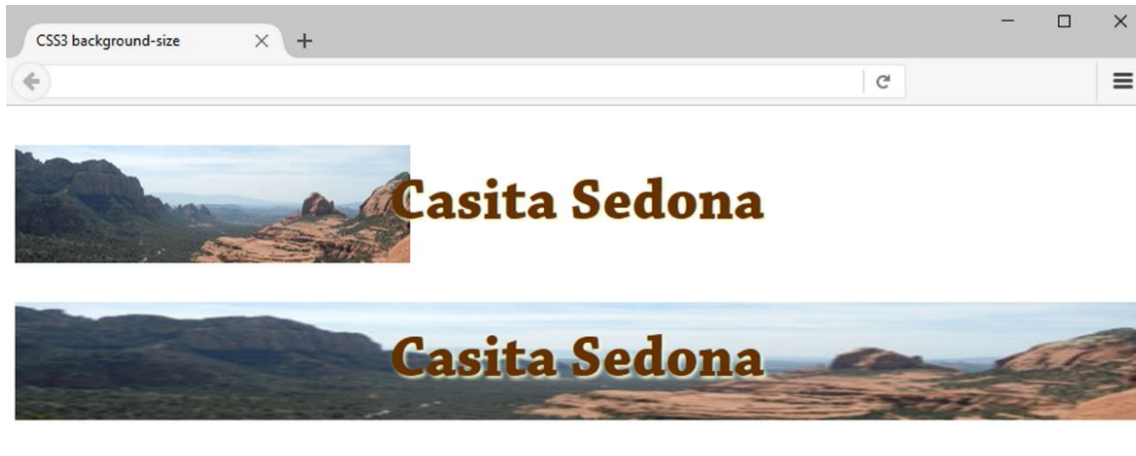

background-origin  
set to border-box

# CSS background-size Property

can be used to resize or scale the background image

Without  
background-size property

background-size: 100% 100%;

# CSS Multiple Background Images

```
body { font-size: 150%;  
       font-family: Arial, sans-serif;  
       color: #992435;  
       background-image: url(coffeepour.jpg) ;  
       background-repeat: no-repeat;  
       background-size: cover;  
       background-attachment: fixed;  
       background: url(coffee.gif) no-repeat left bottom,  
                  url(coffeepour.jpg) no-repeat fixed;  
       background-size: auto, cover;  
}
```

# More about images - Image Map element

```
<h1>Image Map</h1>
<map id="fishing" name="fishing">
  <area href="http://nature.org" shape="rect" coords="0,51,416,170" alt="The Nature Conservancy" title="The Nature Conservancy">
  <area href="http://www.fishingdoorcounty.com" shape="rect" coords="24,188,339,283" alt="Door County Fishing Boat" title="Door County Fishing">
</map>

```

## Image Map

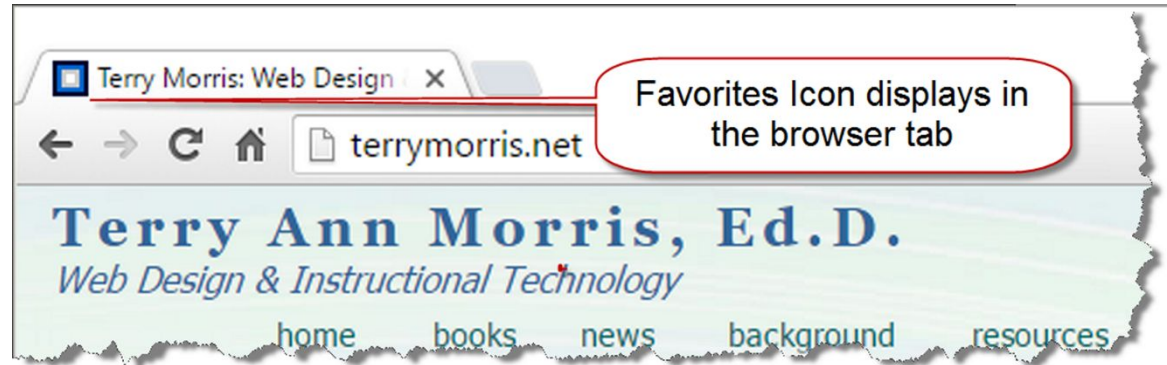

## Sample image map

# Favorites Icon - favicon

- A square image associated with a web page

- Usually named: favicon.ico
- May display in the browser address bar, tab, or favorites/bookmarks list
- Configure with a link tag:

```
<link rel="icon" href="favicon.ico" type="image/x-icon">
```

# Sources for Graphics

- Create them yourself using a graphics application:
  - GIMP
  - Adobe Photoshop
  - Adobe Fireworks
- Download graphics from a free site
- Purchase/download professional-quality graphics
- Purchase a graphics collection on a CD

# Guidelines for Using Images

Reuse images

Consider image file size with image quality

Consider image load time

Use appropriate resolution

Specify dimensions

Be aware of brightness and contrast

# CSS Rounded Corners

border-radius property

- Configures the horizontal radius and vertical radius of the corner
- Numeric value(s) with unit (pixel or em) or percentage

Example

```
h1 { border-radius: 15px;  
}
```

**Figure 4.32** Rounded corners were configured with CSS

# CSS box-shadow Property

Example:

```
#wrapper { box-shadow: 5px 5px 5px #828282; }
```

[Home](#)   [Menu](#)   [Directions](#)   [Contact](#)

## Locally Roasted Free-Trade Coffee

Indulge in the aroma of freshly ground roast coffee. Specialty drinks are available hot or cold.

## Specialty Pastries

Enjoy a selection of our fresh-baked, organic pastries, including fresh-fruit muffins, scones, croissants, and cinnamon rolls.

## Lunchtime is Anytime

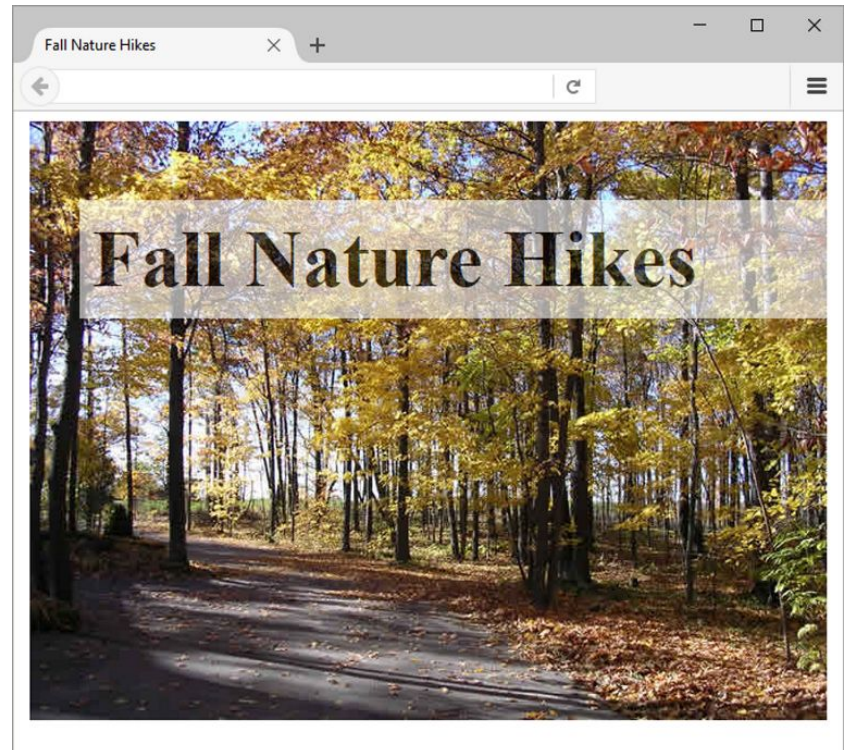

Savor delicious wraps and sandwiches on hearty, whole-grain breads with locally-grown salad, fruit, and vegetables.

Copyright © 2020 Your Name Here

# CSS opacity Property

Configure the transparency of the element

Example: `h1{ background-color: #FFFFFFF;  
opacity: 0.6; }`

# Rgba Color

Four values are required:

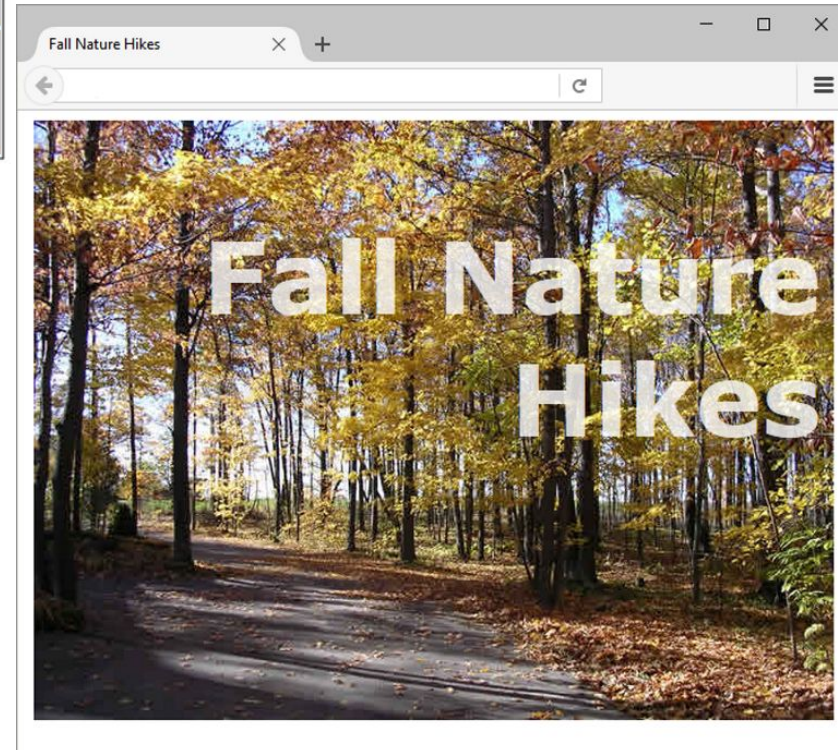

red color, green color, blue color, and alpha(transparency)

- The values for red, green, and blue must be decimal values from 0 to 255.
- The alpha value must be a number between 0 (transparent) and 1 (opaque).

```
h1 { color: #ffffff;  
      color: rgba(255, 255, 255, 0.7);  
      font-size: 5em; padding-right: 10px;  
      text-align: right;  
      font-family: Verdana, Helvetica, sans-serif;  
}
```

# Hexadecimal and RGB decimal color values

#FFFFFF rgb(255, 255, 255)	#FFFFCC rgb(255, 255, 204)	#FFF999 rgb(255,255,153)	#FFF666 rgb(255,255,102)
#FFF333 rgb(255,255,51)	#FFFF00 rgb(255,255,0)	#FFCCFF rgb(255, 204, 255)	#FFCCCC rgb(255,204,204)
#FFCC99 rgb(255,204,153)	#FFCC66 rgb(255,204,102)	#FFCC33 rgb(255,204,51)	#FFCC00 rgb(255,204,0)
#FF99FF rgb(255,153,255)	#FF99CC rgb(255,153,204)	#FF9999 rgb(255,153,153)	#FF9966 rgb(255,153,102)

# HSLA Color

hue, saturation, light, alpha

Hue is a value between 0 and 360

Saturation: percent

Lightness: percent

Optional alpha: from 0 to 1

**Figure 4.40** A color wheel

# HSLA color examples

**Red**

**`hsla(360, 100%, 50%, 1.0);`**

**Green**

**`hsla(120, 100%, 50%, 1.0);`**

**Blue**

**`hsla(240, 100%, 50%, 1.0);`**

**Black**

**`hsla(0, 0%, 0%, 1.0);`**

**Gray**

**`hsla(0, 0%, 50%, 1.0);`**

**White**

**`hsla(0, 0%, 100%, 1.0);`**

# CSS Gradients

Gradient: a smooth blending of shades from one color to another

Use the background-image property

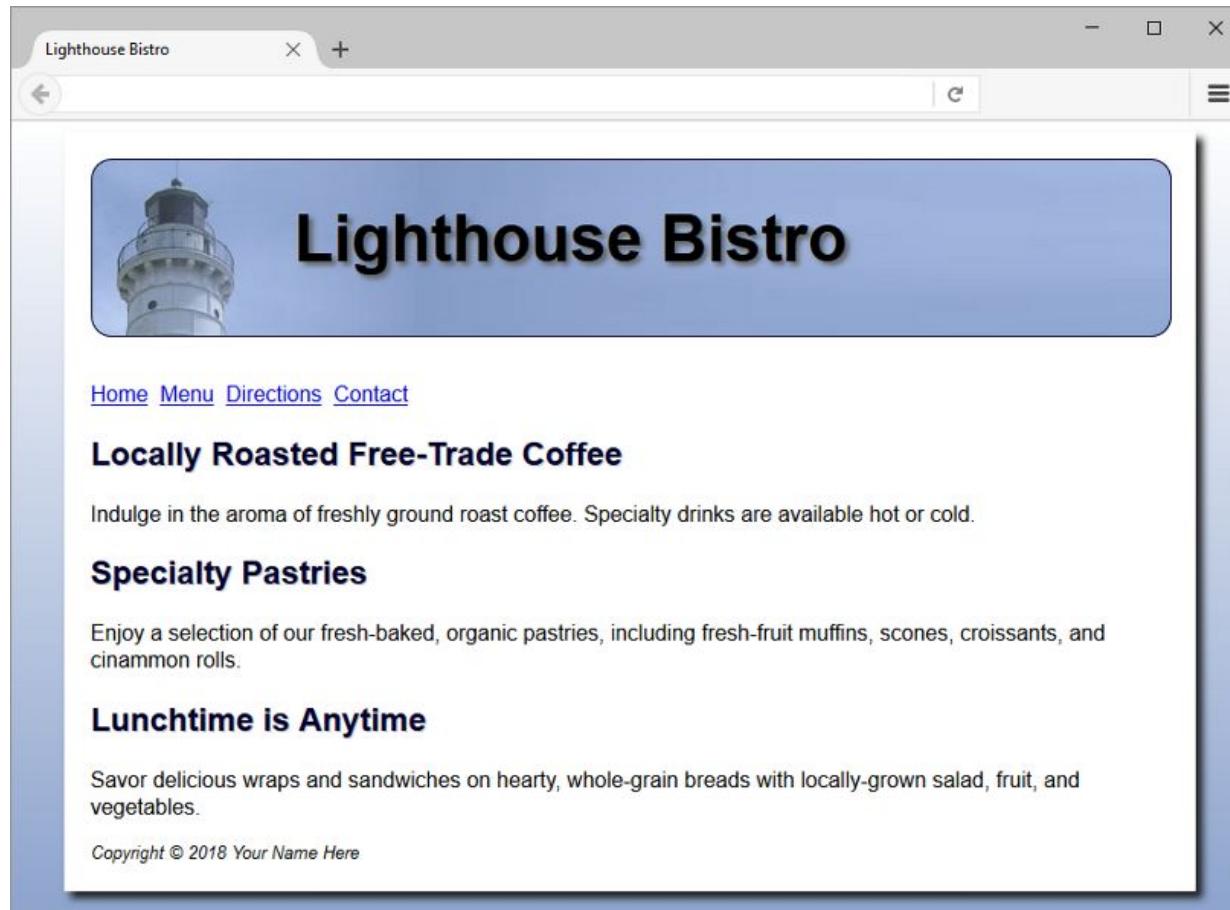

- linear-gradient()
- radial-gradient()

Example:

```
body {  
    background-color: #8FA5CE;  
    background-image: linear-gradient(#FFFFFF, #8FA5CE);  
}
```

The gradient in the background was configured with CSS without an image file

# Summary

- This chapter introduced the use of visual elements and graphics on web pages.
- As you continue to create web pages, look back at the guidelines and accessibility issues related to graphics.
- The number one reason for visitors to leave web pages is too long of a download time. When using images, be careful to minimize this issue.
- Provide alternatives to images (such as text links) and use the alt attribute on your pages.
